ABOUT ME

- Fullstack Developer with internship experience in Java, Spring Boot, and Angular, having contributed to production systems across healthcare and government-backed platforms. Ready to take on a full-time role.

WORK EXPERIENCE

Fullstack Developer Intern | AtwoM Vietnam | (2/2026 - 8/2026)

National Startup Business Registration Platform / *Tech Stack: Microservices (Spring Boot, Spring Cloud), React, PostgreSQL*

- Implemented features on a custom-built, centralized **identity/auth service** used across the **microservices** architecture, gaining hands-on exposure to how services stayed isolated yet coordinated through it.
- Worked within a system modeling the business registration domain: startup applications going through approval, valuation, and (if approved) listing for potential acquisition — a workflow still being actively built out.
- Implemented backend logic based on assigned tickets, translating team requirements into working service code.
- Followed **GitFlow** practices and participated in sprint reviews.

Fullstack Developer Intern | FPT Software | (1/2025 - 1/2026)

Healthcare Management System (Japan Client) / *Tech Stack: Full-stack Monorepo (Spring Boot, Angular Workspaces), SQL Server*

- Contributed to migrating legacy screens onto a new **decoupled architecture**, structured as a **monorepo** with separate Angular frontend workspaces and Spring Boot backend modules communicating through **REST APIs**.
- Fixed UI and logic bugs specific to the migration — cases where legacy data or behavior didn't map cleanly onto the new architecture.
- Built the prescription upload screen's loading state using **RxJS** to handle the async operation while the backend cross-checked active ingredients and compounds for drug interactions and safety issues.
- Ensured the UI clearly distinguished "still checking" from "check failed" states, since unclear feedback in this business-critical step could risk a prescription being processed before the safety check completed.
- Resolved general visual, layout, and logic issues from **Jira** tickets while maintaining Japanese software quality standards.
- Gained working exposure to a structured software development workflow — ticket-based task assignment via **Jira**, code review before merge, and sprint-based delivery cycles — while integrating into an existing cross-functional team.

SKILL & BACKGROUND KNOWLEDGE

Backend: Java (Core), Spring Boot (MVC, REST, Spring Cloud), Microservices, Modular Monolith, JWT, RabbitMQ
Databases & Caching: MySQL, PostgreSQL, Redis, Flyway
Design Patterns: Singleton, Observer, Dependency Injection
DevOps & Infrastructure: Docker/Docker Compose, GitHub Actions (CI/CD), Nginx, Cloudflare (Tunnel, DNS)
Testing: JUnit, Mockito, Postman (API testing)
AI-Assisted Development: AI coding agents (OpenCode, Antigravity CLI, Cursor), spec-driven prompting, review and verification of AI-generated code
Frontend: JavaScript/TypeScript, Angular, React (Redux, shadcn/ui, Tailwind CSS)
Tools: Git, Maven, DBeaver
Software Process: SDLC, Agile/Scrum, GitFlow, code review, Jira
Soft Skills & Languages: English (reading & writing), self-learning, problem-solving, teamwork

PROJECTS

CINEPLEX | *(6/2025 - 6/2026)*

Movie Reservation System / *Tech stack: Spring Boot, MySQL, Redis, Angular, Ng-Zorro, NgRx*

- Designed a **modular monolith** backend with isolated domain modules (booking, cinema, identity, catalog) sharing infrastructure through a common module, avoiding a distributed system's overhead while keeping domains decoupled.
- Prevented double-booking under concurrent checkout using **Redis TTL locks** to hold seats for a fixed window, combined with **Redis Pub/Sub** to push real-time seat status to all active users via **SSE**.
- Implemented **JWT**-based authentication with **token rotation**, invalidating prior tokens on refresh to reduce exposure from leaked or reused tokens.
- Offloaded heavy async work — PDF report generation and confirmation emails — to **RabbitMQ** background workers, keeping the checkout flow fast.
- Built an admin analytics dashboard with exportable **JasperReports** and integrated the **VNPay** sandbox gateway

EDUCATION

University of Transport and Communications (UTC) 2022 - 2027

Bachelor of Information Technology (Expected 2027)
